

Fagron NutriGen

Professional nutrigenomic counselling

Fagron NutriGen

Professional nutrigenomic counselling

Fagron NutriGen is an innovative nutrigenomic algorithm for personalizing nutrition, supplementation and weight loss planning.

Nutrigenomics

Nutrigenomics is the science analyzing and understanding how an individual's genetic makeup responds to dietary intake.

"Inherited risk factors determines 40-70% of individual BMI¹⁻²."

Intended use

Fagron NutriGen is intended to assist health professionals in making specific care decisions to prevent hereditary health risks. It analyses 109 genetic predispositions with a significant impact on health and nutrition-related parameters and combines this data with the analysis of patient's anamnesis to recommend the most appropriate health and nutritional advice.

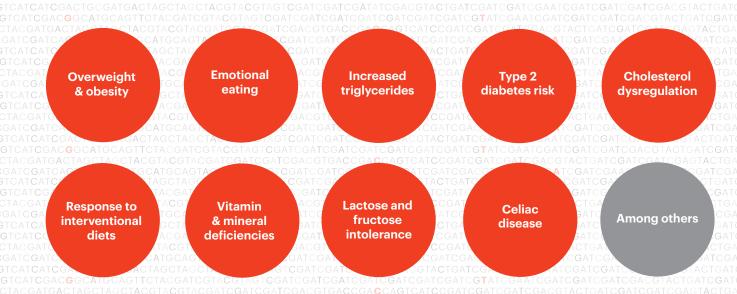

Patient's motivation

Research has shown that personalized DNA-based dietary counselling can increase motivation and enhance diet compliance compared to general guidelines^{2,3}.

What is evaluated?

Fagron NutriGen combines the analysis of 109 health and nutrition-related genetic predispositions (obesity, diabetes, triglycerides, celiac diseases, responses to exercise and interventional diets, vitamin & mineral deficiencies, among others) with relevant patient's anamnesis (intolerances, diseases, medication, blood pressure, physical activity and habits, among others).

The suggested diet plan considers the following predispositions:

Professional nutrigenomic counselling

Our panel of 109 genetic tests is exclusively based on peer reviewed replicated studies. Genotyping assay is based on the DNA microarray technology guaranteeing more than 99% of of reproducibility and sensibility.

A multidisciplinary team of medical doctors, nutritionists, pharmacists, geneticists and programmers, following highest quality standards, was involved in the development and validation of the Fagron NutriGen algorithm.

Nutritional values were selected from the European Food Information Resource, authoritative source of food composition data for nutrients, and bioactive compounds with potential health benefits.

Active ingredients and dosages from the TRC Natural Medicines Database, the most authoritative resource on dietary supplements, herbal medicines, and complementary and integrative therapies, were also included.

The company is applying for *in vitro* medical device license under the EU 2017/746 regulation.

Fagron NutriGen procedure

Kit content:

- 1x Swab tube
- 2x Patient consent form
- 1x Instructions
- 2x ID-labels
- 1x Biohazard bag
- 1x Shipping Courier bag

1. Collect the DNA sample according to the instructions.

3. Send the sample following the process agreed with your sales representative.

2. Register the kit and complete the patient questionnaire online at www.fagrongenomics.com

4. Results are provided in 4-5 weeks.

Fagron NutriGen report

Once patient's questionnaire is complete and genetic data available, reports can be viewed and downloaded from a secure personal area. Our digital healthcare platform meets the requisite regulatory and data protection standards.

Report includes:

Summary of patient characteristics

Full genetic analysis and explanation

Suggested 3-phase personalized supplementation plan
